Practice Transformation and Population Health Academic Generalist Fellowship

- This 2-year interdisciplinary program includes training in research and educational methods, as well as professional development opportunities. Research efforts include practice-based research networks, health information technology, health care disparities, population health, telehealth, pediatrics and geriatrics.

MISSION AND GOALS

- Excel in primary-care oriented clinical research, teaching, and patient care.
- Conduct primary care research, with a focus on practice transformation, prevention and population health.
- Obtain a Master of Public Health degree, which involves a structured curriculum and development of a grant proposal.
- Develop clinic and teaching skills by providing care to diverse groups of patients both directly and through supervision of trainees in clinical settings.
