12/01/03-06/30/07: 1 R01 MH63831-01A1 (NIH/NIA). Cholinesterase Inhibitor and Risperidone in Alzheimer's (CARA). The goal of this study is to evaluate the clinical effects of combined use of an atypical antipsychotic, risperidone, with the Cholinesterase inhibitor, donepezil, in the treatment of neuropsychiatric symptoms in nursing home patients with Alzheimer's disease and psychosis. (Role co-principal investigator)

**Federal Grants**

04/01/03-03/31/08 DIADS-2-NIMH: Depression in Alzheimer's disease Study -2. This is a 12-week placebo-controlled clinical trial assessing the efficacy and safety of sertraline for DSM-IV major depression in Alzheimer's disease. (U01MH066176-01A1)

9/30/03-06/30/07 1 R01 AG021488-01: NIH/NIA: Antipsychotic Discontinuation in Alzheimer's disease. The primary aim of this project is to evaluate the ideal time of treatment with atypical antipsychotics in demented, agitated patients. (R01AG021488-01)

9/1/02-4/30/07 5 T32 AG21794-03: IRMMA (NIMH) Institute for Research Training on Mental Health and Aging. The aim of IRMMA is to recruit, Train, and retain promising minority individuals from post-doctoral programs in research areas that relate to mental health and aging.

07/01/03-06/30/06 ADCS-022 VN: A Randomized, Double-Blind, Placebo-Controlled Trial of Valproate to Attenuate the Progression of Alzheimer's disease. The goal of this trial is to determine whether chronic valproate therapy delays the emergence of agitation and/or psychosis in outpatients with probable Alzheimer's disease (AD) who have not experienced agitation and psychosis in their illness.

02/04/03-03/09/06 ADCS-68 HD. High Dose Supplements to Reduce Homocysteine and Slow the Rate of Cognitive Decline in Alzheimer's disease. The major goal of this trial is to determine whether reduction of homocysteine levels with high-dose, folic acid/B6/B12 supplementation will slow the rate of cognitive decline in subjects with Alzheimer's disease.

12/01/02-12/31/05 ADCS-68 LL. A Multi-Center, Randomized, Double-Blind, Placebo-Controlled Trial of Simvastatin to Slow the Progression of Alzheimer's disease. The major goal of this project is to evaluate safety and efficacy of simvastatin to slow the progression of Alzheimer's disease.

1/15/02-2/28/07 ADCS-68 PI. Assessment Measures for AD Primary Prevention Trials. The major goal of this trial is to evaluate new instruments designed for use in primary prevention trials.
