Let’s talk... Fibrosis, the ugly side of collagen

Did you know?

- Collagen is more than skin deep.
- When the body overproduces collagen, it can lead to fibrosis.
- Fibrosis is the end result of many diseases.
- Fibrosis can affect nearly any organ.
- Nearly half of deaths in developed countries are due to fibrosis.
- Cost-effective treatments for fibrosis can be made from plants.

Come join Dr. Feghali-Bostwick at Halo as she shares several fascinating aspects of her team's scleroderma research. Learn how they are identifying the mechanism used to trigger fibrosis, conducting studies on a very promising drug for stopping and even reversing fibrosis in models of scleroderma, and MUCH MORE. You don’t want to miss this fascinating discussion that is sure to leave you looking at your skin in a whole new light!
