NIAID Update for the Medical University of South Carolina

Matthew J. Fenton, Ph.D.
Director, Division of Extramural Activities, NIAID
July 14, 2017
NIAID Mission

Conduct and support basic and applied research to understand, treat and prevent infectious, immunologic, and allergic diseases
NIAID Infectious Disease Research: A Dual Mandate

Maintain and “grow” a robust basic and applied research portfolio in microbiology, immunology and clinical research

Respond rapidly to new infectious disease threats

New/Improved Countermeasures

FY 2017 Appropriation

- HIV/AIDS: $1.66
- BIODEFENSE/EID: $1.85
- IID: $1.39

TOTAL: $4.9B
NIAID FY 2017 Financial Management Policy

- **R01 Payline**
  - Established PI: **11th Percentile**
  - New PI: **18th Percentile**

- **Non-competing and Competing grants: no adjustments**

- **Competing research initiatives:** no cuts will be made in FY 2017 beyond previously planned levels for initiatives that were set by the program divisions in FY 2015 (some cuts, up to 10%)

- **Bridge Awards:** **$18M**

- **Select Pay:** **$9M**

Note: R21 final payline set at an overall priority score of 28
Proposed Cuts/Increases to Selected Agencies in Budget Blueprint

-29.3%  EPA
-26.0%  USAID
-20.7%  Labor
-15.2%  Commerce
-14.3%  Agriculture
-13.2%  Education
-11.4%  Health & Human Services

Homeland Security  +4.0%
Veterans  +5.1%
Defense  +11.2%
NIAID Funding, FY 2010-2018

FY18 President’s Budget
Lawmakers from both sides of the aisle in the U.S. House of Representatives today voiced their displeasure with the Trump administration’s proposed . . . cut next year to the budget of the National Institutes of Health (NIH)....

Hypercompetition: Applicants and Awardees for NIH RPGs

![Hypercompetition graph showing the number of applicants (teal triangles) and awardees (red circles) from 2003 to 2015. The number of applicants has grown significantly, while the number of awardees has remained relatively stable. Data: OER SARB]
Who Are The Winners and Losers?

Is this largely due to Baby Boom demographics?

Multiple analyses indicate established PIs are “outcompeting” other groups due to increased resiliency

Data: OER SARB
Background: Skewed Distribution of Resources

- 20% of Scientists Receive 56% of Dollars
- 10% of Scientists Receive 40% of Dollars
- 1% of Scientists Receive 11% of Dollars

Data: OER SARB
NIH Will No Longer Propose a Cap on Grants (Grant Support Index)

- Too difficult to account for collaborative activities. Major concern that the Grant Support Index (GSI) would discourage collaboration and team science.
- Skepticism about data underpinning the analysis NIH used to formulate GSI.
- Potential to redistribute grant funding from well-funded, well-established PIs to less-well-funded, younger and mid-career PIs.
- There is still broad support for addressing underlying problem of early- and mid-career PIs dropping out of the pipeline.
  - Note that over 40% of NIAID PIs who received a New Investigator R01 drop out 6-10 years after receiving their first R01.
Next Generation Researcher Initiative: Goals

- To increase the number of early stage investigators (ESI) funded
- To increase the number of mid-career investigators who obtain their second R01 equivalent
- To stabilize the career trajectories of all scientists
- To maximize the impact of NIH funding

See: https://grants.nih.gov/ngri.htm
Next Generation Researcher Initiative: Implementation

• Apply a similar strategy as the NIH New PI policy
  – Define metrics and set targets
  – Let ICs decide how they can best achieve targets
  – Track progress

• Set aside funds to support additional meritorious ESI and mid-career Investigators
  – $200M/year in first year, and an additional ~$200M/year for 4 additional years (for a total of 5 years), reaching a steady state cost of ~$1B

• NIAID has already raised its New Investigator R01 payline to the 18th percentile

PS Training FOAs Most Frequently Used at NIAID

• MSTP and F30 dual degree fellowship (medical students)
• T32 (supports clinical fellows)
• K01 mentored research scientist development award
• K08 mentored clinical scientist research career development award
• K23 mentored Patient-Oriented Research career development award (limited to only POR)
• K22 career transition award (2 yr)
• K99/R00 pathway to independence award (2 yr + 2 yr)
NIH Programs That Support PS

- F30 Dual-Degree Fellowship
- MSTP
- New R38 Award
- New K38 Award
- K01, K08, K23, F32, T32
- Transition Awards
  - K22
  - K99
  - R00

Research in Residency: NIH StARR Program

• Stimulating Access to Research in Residency (StARR)

• New NIH FOA to be published shortly

• Institutes participating to date: NIAID, NCI, NHLBI

• This is a two-phase award
  
  o Institutional phase that supports residents
  
  o Individual phase that supports fellows (portable)
StARR Pilot Program

• Phase I (R38) institutional awards: 5 yr award, 1 award/institution/yr supporting multiple residents

• No more than 16 R38 awards/yr across all participating Institutes during this pilot

• Peer review needed to approve progression to the Phase II (K38) award

• Phase II (K38) individual awards: support for up to 2 yr of research support at 80% PGY salary plus $10K/yr research support
  o About $100K/yr/participant in direct costs plus 8% indirect costs
StARR Program Timeline

- July-August, 2017 - FOA Release
- October, 2017 - Application Receipt Date
- July, 2018 - First R38 Awards
PS Interest in K Programs

NIH K99 Applicants: PhD, MD & MD/PhD
(FY07 - FY12)

NIH K08 Clinical Scientist Applicants:
(FY07 - FY12)

PSW Report, 2014; figure 3.32

IMPAC II database
New NIAID K99/R00 for PS

• A new NIAID K99/R00 award for young PS to support transition to an independent academic faculty position

• A new K99/R00 restricted to PS would create a targeted pool of funds to support PS applicants

• These PS K99/R00 applications would be reviewed by their own Special Emphasis Panel

• These grants could have their own pay line
New NIAID K99/R00 for PS

• New NIAID K99/R00 award for residents, clinical fellows, instructors and clinical assistant professors to support their transition to an independent academic faculty position; restricted to PS

• 50% minimum effort to attract clinical trainees

• Proposed research must be in a NIAID mission area with at least 1 clinical/translational aim

• Provide up to 2 years of K99 (up to $100K salary & res) and 2 years of R00 (up to $249K salary & res) support

• Anticipate release FOA in FY2018

Suspected and Confirmed Zika Cases in the Americas, 2015-2017

Reported Cases of Zika Virus Disease in the United States, 2015–2017

U.S. States / District of Columbia

- 5,285 cases*
  - 5,031 travel-associated
  - 224 locally acquired mosquito-borne
  - 46 sexually transmitted
  - 1 laboratory-acquired, 1 unknown

U.S. Territories

- 36,583 cases*
  - 36,440 locally acquired
  - 143 travel-associated

*Excludes congenital cases

Source: CDC, data as of May 31, 2017
Locally Acquired Mosquito-Borne Zika Infections in Florida and Texas, 2016-2017

- Florida:
  - Pinellas County
  - Palm Beach County
  - Broward County
  - Miami-Dade County

- Texas:
  - Cameron County

N=218

N=6

Source: CDC, data as of May 31, 2017
Zika-Affected Pregnancies and Outcomes in the United States, 2015-2017

- **U.S. States / District of Columbia**
  - **1,883 pregnancies**
    - 1,579 completed pregnancies with or without birth defects
    - 72 liveborn infants with birth defects
    - 8 pregnancy losses with birth defects

- **U.S. Territories**
  - **3,916 pregnancies** *

*CDC is not reporting numbers for adverse pregnancy outcomes in the territories at this time

Source: CDC, data as of May 23, 2017
In 2016, 10% of pregnant women in the U.S. with confirmed Zika infection had a fetus or baby (n=51) with birth defects

15% of women infected in the first trimester had an affected fetus or baby
Doctors Tie Zika Virus to Heart Problems in Some Adults

- 8 adult patients with Zika infection in Venezuela developed serious cardiovascular complications
Zika Virus Persistence in the Central Nervous System and Lymph Nodes of Rhesus Monkeys

M Aid, DH Barouch et al.

- Virus cleared from peripheral blood within 7-10 days, but persisted in CSF for up to 42 days and in lymph nodes and colorectal tissue for up to 72 days
NIH Zika Vaccine Candidates

- DNA vaccine (NIAID VRC)
- Zika purified inactivated vaccine (WRAIR/NIAID/BARDA and Sanofi Pasteur)
- Live-attenuated Zika/dengue chimeric virus (NIAID intramural/Butantan)
- mRNA vaccine candidate (NIAID VRC, GSK)
- Vesicular Stomatitis Virus vectored vaccine (NIAID extramural)
NIH Zika Vaccine Candidates

- **DNA vaccine (NIAID VRC)**

- Zika purified inactivated vaccine (WRAIR/NIAID/BARDA and Sanofi Pasteur)

- Live-attenuated Zika/dengue chimeric virus (NIAID intramural/Butantan)

- mRNA vaccine candidate (NIAID VRC, GSK)

- Vesicular Stomatitis Virus vectored vaccine (NIAID extramural)
Phase 2 Zika Vaccine Trial Begins in U.S. and Central and South America

Study Will Evaluate NIH’s Experimental DNA Vaccine

Enrollment target: at least 2,490 individuals in the continental United States, Puerto Rico, Brazil, Peru, Costa Rica, Panama and Mexico
Phase 2/2b: ZIKV DNA Vaccine Candidate

- **VRC 705:** A Phase 2/2b, Randomized, Placebo-Controlled Trial to Evaluate the Safety and Immunogenicity of a Zika Virus DNA Vaccine, VRC-ZKADNA085-00-VP

- 30+ sites in the US, Caribbean, Central and South America

Launched March 31, 2017
Global Examples of Emerging and Re-Emerging Infectious Diseases

- Antimicrobial-resistant threats
  - CRE
  - MRSA
  - *C. difficile*
  - *N. gonorrhoeae*

- H3N2v influenza
- Cyclosporiasis
- *E. coli* O157:H7
- Measles
- Human monkeypox
- Listeriosis
- Bourbon virus
- 2009 H1N1 influenza
- Adenovirus 14
- Anthrax bioterrorism
- Chikungunya
- Hantavirus pulmonary syndrome

- West Nile virus
- Enterovirus D68
- Powassan virus
- Cryptosporidiosis
- *E. coli* O104:H4
- Drug-resistant malaria
- Hepatitis C
- vCJD
- Lyme disease
- Lassa fever
- HIV

- Yellow fever
- Cholera
- Marburg hemorrhagic fever
- MDR / XDR tuberculosis
- Plague
- Zika virus
- Ebola virus disease
- Human monkeypox
- Hendra virus
- Nipah virus
- SARS

**Newly emerging**  **Re-emerging/resurging**  **“Deliberately emerging”**

June 2017
Phase 2 Trials of 2013 H7N9 Vaccine in Healthy Adults

Serological Responses to an Avian Influenza A/H7N9 Vaccine Mixed at the Point-of-Use With MF59 Adjuvant
A Randomized Clinical Trial
MJ Mulligan, DI Bernstein, P Winokur et al

Effect of Varying Doses of a Monovalent H7N9 Influenza Vaccine With and Without AS03 and MF59 Adjuvants on Immune Response
A Randomized Clinical Trial
LA Jackson, AR Bellamy et al

Acceptable safety profile; two adjuvanted doses needed to induce adequate immune response
Five Waves of Human H7N9 Influenza Infections in China, February 2013-present

- 1,532 confirmed human cases, 581 deaths
- 5th wave: >45% of cumulative cases

Source: FAO, 5/31/17
NIAID H7N9 Influenza Proposed Vaccine Trials

- Phase 2 trials (several hundred volunteers) evaluating safety and immune response
  - Healthy Adults
  - Elderly
  - Children
  - Pregnant Women
  - Mix and Match (Vaccine from Company A + Adjuvant from Company B)
  - Concomitant with Seasonal (Adults)
  - Concomitant with Seasonal (Children)

- Trials would be conducted via the NIAID Vaccine and Treatment Evaluation Units (VTEUs)
On the Horizon:

**New Ebola Outbreak in Democratic Republic of the Congo (DRC) April-June 2, 2017**

- 7 cases (4 confirmed, 3 probable) and 4 deaths
- Bas-Uélé province, >1,300 kilometers from Kinshasa
- 8th Ebola virus disease outbreak in DRC since 1976

---

**Yellow Fever — Once Again on the Radar Screen in the Americas**

CI Paules and AS Fauci
Priorities in 5 major areas:

- Infectious diseases (non-AIDS), including emerging and re-emerging diseases and biodefense
- HIV/AIDS
- Allergy, immunology, and immune-mediated diseases
- Global Health
- Essential foundations for the future
  - research resources and infrastructure, training, communications/outreach
Questions
