**Installation Notes:**

1. Saw cut or scored joint.
2. Ensure proper grade for water to depth base on joint used and material.
3. A sealant is no better than the surface to which it is attached. Proper preparation is critical.
4. Sealant is to be installed to the base coat.
5. Joints of DPC, membranes, and surrounds are to be "one wash".
6. The manufacturer's instructions must be carefully followed to obtain proper sealant adhesion.

**Note:**

1. The damaged coping cover plates to be replaced as required per the construction documents.

**Notes:**

1. Remove all existing asphaltic surfacing down to the existing roof membrane, and prime per manufacturer's instructions. All aggregate to be removed from the surface.
2. Granular surfaced modified cap sheet to be fully adhered in cold adhesive.
3. New base flashing to be installed over existing base flashing.
4. Height of wall noted.
