1. TESTING OF WATER SAMPLES OBTAINED FOR OTHER THAN PUBLIC UTILITY

Reference: JCAH, Functional Safety and Sanitation Standard

A clean environment is essential in eliminating health hazards. Of major concern is the water supply system. When water is obtained from a source other than a public water supply, it shall be tested at least monthly and treated as necessary to ensure its potable. It shall be approved for drinking, hand washing, cooking and washing of foods, cooking and eating utensils and food preparation or processing areas.

It shall be the responsibility of the Chief of Maintenance of the Physical plant department to draw the samples, process monthly tests and keep the test results on file for a period of at least two years.
