OXYGEN ALARM PROCEDURE:

The following procedure is to be followed when the oxygen alarm sounds.

1. Notify the MUHA Maintenance Manager, and the Nursing Supervisor.

   Check the pressure gauge in pipe shaft on 1st floor East. If line pressure is below 50 psi:

   a. Check level on main storage tank. If reading is below 150, call 1-800-392-3595 to order oxygen. MUSC account number is 10282.

   b. If oxygen level is okay, check discharge pressure supply to hospital. If pressure is below 50 psi, strainer on regulator needs to be cleaned.

   c. To clean strainer, pressure will need to be maintained manually at 50-55 psi by using by-pass.
