CONSTRUCTION & DEMOLITION
WASTE DIVERSION & RECYCLING GUIDE

Did you know??

It is estimated that only 20-30% of Construction & Demolition Waste is recovered for recycling

On average, 80% of a home builder’s waste stream is recyclable

Materials wasted on a jobsite are paid for twice — once for purchase and again for disposal

In 2007:
• 21% or 3.6 million tons of the SC waste stream was C&D debris
• 1.2 million tons were recycled
• 2.2 millions tons went to C&D landfills
• Remainder was incinerated or sent to MSW landfills

Benefits of C&D Recycling Include:
• Reducing overall energy costs
• Creating jobs in the recycling industry
• Extending the life of landfills
• Reducing the environmental impact of creating new materials

July 1, 2008 Charleston County Bees Ferry Landfill stopped accepting C&D debris from private haulers who must now divert C&D debris to public landfills in adjacent counties and private C&D landfills at an increased cost. Recycling and reuse measures are an effective way to combat rising costs.
